

Scenario

You just retired and moved to a new city. After spending many weeks and months at home enjoying retirement, you feel a desire to explore this new city by finding things to do. You decide to find things to do online.

Task 1: Login/Register to the app or skip login screen.

Task 2: Select an interesting event in your area or conduct a detailed search based on your specified interests.

Task 3: You like free events, so make sure the results display only free events and/or less expensive events.

Notes

What changes you should make to your application:

User 1 Problems:

- Be able to skip login screen
- Organize search results by price

User 2 Problems:

- Make it clearer where user is on map
- Calendar screen to keep track of user-marked events and events user will attend

What you need to keep the same for your application:

User 1 Complements:

- Layout is understandable
- Detailed search results

User 2 Complements:

- Broad selection options
- Logical flow of screens
